Object: **ProBee®** description

CHRIVA made *ProBee®*, an organic product made up of a mix of prebiotic and probiotic (as microorganisms) for the development and increasing the well-being of the bees, which can greatly increase the strength of families.

From experimental tests carried out on the field in the apiary, it was found that the bees treated with *ProBee®* are more populous and more healthy compared to the control group not treated.

In particular, the differences at the end of experiment (August 2012) between the bees treated with *ProBee®* and the untreated control group, are shown below:

- Increased populous of adult bees by **83,43%**;
- Increased brood of **106,61%**;
- Increase of capped brood not **174%**;
- Increase of **54%** of the eggs;
- Increase of compact brood **90%**.

ProBee® represents a new frontier, is a product easy to apply, as it is dispensed spray on the beehive after opening the hive roof.

For the application, it should be a simple pump spray dispenser. The cost of the product is low and the benefits are gone high.

For an excellent use: shake the packet of 10g *ProBee®* and mix it directly in cloro free two liters water in an ermetically sealable container. Mix gently until it dissolves an leave it from 3 to 12 hours at the environment temperature. Before every use shake it very gently. One prepare the product must utilized in 7 days, if well closed, in cool and dry place. Although for best results should be used within 3 and 24 hours.
